Why Soften?

There are many reasons to soften your water. This page will touch on the most common benefits. You will notice immediate benefits throughout the home.

Less Soap Usage:

Save money and soap with a Delta Water Systems water softener. Softened water allows you to reduce your soap usage by up to two-thirds your normal use. With soft water, soaps and detergents aren't fighting the hardness minerals and therefore can perform the way they were meant to. You will find the pure, less expensive soaps to be ideal with softened water. Without the problem-causing calcium and magnesium, you will notice more suds while using less soap.

Ease of Cleaning:

Delta Water Systems make cleaning easier. Bathtubs, fixtures, shower curtains and doors will all stay cleaner longer. Soap scum is virtually eliminated and those chrome fixtures will stay sparkling clean. Not to mention the elimination of spotting on the dishes in the dishwasher.

Money Savings:

Water Softeners actually pay for themselves over time. With the money you save in soaps, detergents, cleaning time, lotions, water heater energy, and other cleaning agents, you will find substantial savings. Those dollars add up quickly each month.

Smoother Skin...Silky Hair:

When you think softened water - think of the spa. You will enjoy smoother, softer skin and hair when bathing in softened water. Dry skin plagues many Americans due to hard water and chemical filled soaps. Forget the hard sticky shower and enjoy a silky smooth feel with a Delta Water Systems water softener.

Softened water leaves you feeling clean and fresh because the water lacks the pour clogging hardness and soaps curds. Hard water leaves a thin film on your skin which leads to itchiness and drying. With soft water, your body's natural oils are allowed to foliate as they should. You will actually get cleaner and rinse better with softened water, contrary to common belief.

Softer and Cleaner Laundry:

As your body gets cleaner with soft water, so does your clothing. Clothing will last longer and feel better when washed in soft water. The absence of the minerals in the water allows laundry detergent to clean better and won't leave soap and hardness curds in your clothing.

Your colors will stay true longer as well as the money savings of buying new clothing. See for yourself. Take a terry cloth or dish rag and soak it in a bucket or sink. Then take that towel and ring the water into a glass and see how much soap is left in your fabrics.

No More Scaling:

You can eliminate any further buildup of scale in your plumbing, dishwasher, hot water heater, and on your fixtures with a water softener. This will prevent costly appliance replacements and plumbing repairs down the road.
